

Surimi production line

ZATOKATECH
PROCESS OPTIMIZATION

Example of production line after our optimization

Example of production line before our optimization

System description

The constructors of Zatoka-Tech designed a supplementation of production line of the crab sticks, popularly known as Surimi. Our system allows a significant reduction in the production time thanks to used feeders and robot work. As can be seen on the presented illustrations, the optimization made by Zatoka-Tech constructors gives the opportunity to replace work of 10 employees, who can take other positions at this time. The system is highly energy-saving and safe for users, and all used materials are allowed to contact with food.
